PROJECTS

Secure Ecommerce Web Application (ASP.NET Core + Identity)

An E-Commerce Book Booking System is a web-based application that allows users to browse books, select specific books, add them to a cart, place an order, and complete secure online payment.

Users can book (order) only selected books, not the entire cart, and receive order confirmation after successful payment. The system ensures smooth inventory handling, secure transactions, and a user-friendly shopping experience.

Angular + ASP.NET Core Project with JWT Authentication

This project is a secure full-stack Employee Management System developed using Angular for the frontend and JWT (JSON Web Token) for authentication and authorization. The application allows employees to securely register and log in, while administrators can manage employee records through protected access.

National Park

This project is a National Park Selection and Appointment Booking Web Application built using ASP.NET Core (MVC + Web API). The system allows users to browse national parks, select a park, and book an appointment/visit slot, while administrators manage parks and booking schedules

SKILLS

- Angular * JWT Token Authentication
- Bootstrap * Swagger
- MySQL (XAMPP) * MongoDB *
- SQL Server
- CSS
- HTML
- ASP.NET Core MVC & Web API *
- Entity Framework Core React.js
- Postman
- C#
- Stripe
